

Specialty	Implants	
Anaesthesia	See Pain	
Breast	Yes	Inject blue dye after induction of anaesthesia. We have a separate time out for this again – after the inappropriate administration of blue dye to a patient that did not need it. This alerts the team to the injection – confirms the side and the need for the injection and also the anaesthetist as there is a 1:1000 risk of significant reaction (inc anaphylaxis)
Cardiology	Yes- pacemakers, stents, valves, defibrillators, loop recorders and other devices	
Cardiothoracic	Yes- valves	
Critical Care		
Dental	Yes
